

# The Beech Bugle

Beech class have had a vibrant and engaging term, filled with curiosity and exploration.

This term, our focus has been on life cycles and the fascinating world of creatures that originate from eggs. The children have thoroughly enjoyed exploring the different types of animals that hatch from eggs, including reptiles, birds, fish, amphibians, and invertebrates. Their imagination has soared as they ventured into the realm of dragons, creatively linking fiction to the biological concepts we have studied.

As part of our exploration, we have also delved into the world of dinosaurs—fascinating reptiles from the past that, like many of our current species,

hatched from eggs. The children have engaged with both fiction and non-fiction texts, which have enabled them to uncover a deeper understanding of these remarkable creatures and the science behind their life cycles.

Our Forest School sessions have effectively complemented classroom

learning by providing opportunities to engage with nature. During these sessions, the children have creatively utilised natural resources to construct dinosaur skeletons, imaginary worlds, and artistic representations. Furthermore, they have explored our school pond and planted seeds to observe evidence of life cycles in habitats on the school grounds, which has been both educational and enjoyable.

In Religious Education, our focus has been on the theme of 'looking forward,'

guided by the biblical story of 'The Lost Son.' Through this narrative, the children have reflected on the important concepts of forgiveness and positive thinking. They have engaged in discussions about the implications of change and the significance of looking to the future with optimism.
